

TITLE
 PLANT MYB TRANSCRIPTION FACTOR HOMOLOGS
ABSTRACT OF THE DISCLOSURE

This invention relates to an isolated nucleic acid fragment encoding a Myb-related
 5 transcription factor. The invention also relates to the construction of a chimeric gene
 encoding all or a portion of the Myb-related transcription factor, in sense or antisense
 orientation, wherein expression of the chimeric gene results in production of altered levels of
 the Myb-related transcription factor in a transformed host cell.
